

KAIMOTION™ FLEX

Designed For The Way You Work.

*Complete Cleaning
For Healthy Results™*

KAIMOTION™ FLEX

Now You Can Build Your Own Multipurpose Microfiber Cleaning and Waxing System

KaiMotion Flex is the most flexible and low cost microfiber cleaning and waxing system available today. This patented system offers everything you need to create your own foolproof cleaning process: a versatile trolley framework; a self-dispensing solution bucket; an interlocking bin system; color-coded microfiber technology — all in a worker-friendly design.

The result is a complete multipurpose system for fast, hygienic ergo-mopping and flawless waxing. Perfect for floors, flat surfaces and touch points, KaiMotion Flex minimizes the risk of cross-contamination. Plus, it delivers a rapid return on investment by reducing labor and chemical costs while eliminating the need for unnecessary equipment.

TROLLEY-BUCKET

The nucleus of this flexible system, the combination trolley-bucket, is a well thought-out high capacity mobile cleaning system:

- Accommodates up to five bins to hold an assortment of tools and supplies.
- 10 gallon reservoir can transport a variety of liquids or cleaning supplies.
- Built-in tool holders around the rim of the reservoir hold scrapers, screwdrivers as well as broom or mop handles.

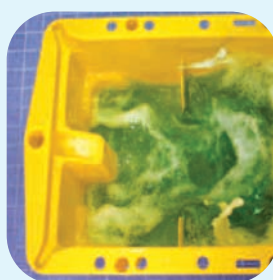

Plus, its self-dispensing design and variable spigot make it ideal for applying stripper, floor finish, gym finish, and fresh cleaning solution in a controlled, precise manner.

SOLUTION STAYS FRESH

The self-dispensing solution bucket means that custodians use only fresh, clean solution.

- Pads never enter the bucket for more effective cleaning with fewer closet trips.
- Changing to a clean microfiber pad removes soil and minimizes the threat of cross-contamination.

NO-SPLASH DESIGN

The no-splash design prevents sloshing and spilling during sudden turns, stops and while going over bumps. Built-in barriers dissipate the waves that are common in mop buckets to provide an ultra-smooth ride.

ULTIMATE PORTABILITY

The KaiMotion Flex system is perfect for climbing stairs and loading into vehicles. In addition, its lightweight bins can be easily removed, connected or separated, making them ideal for transporting up stairs, between buildings or across town.

BIN FEATURES

- Heavy duty handles
- Tight fitting lids
- Convenient nesting and stacking
- Interlocking hooks for connecting bins
- Optional quick-connecting casters
- Semi-transparent to quickly identify contents

INTERLOCKING BINS

KaiMotion Flex includes lightweight, versatile plastic bins that can be used with or without the trolley-bucket.

We've Thought of Everything

The KaiMotion Flex is the outcome of helping cleaning professionals tackle real-world challenges. When designing this system, we considered everything from hygienic cleaning results, productivity, and ergonomics to environmental impact and return on investment. In the end, we believe that KaiMotion Flex combines innovative components and features that will enable you to customize a cleaning system to fit your exact needs.

KAIMOTION™ FLEX

Clean Anything, Anywhere

The KaiMotion Flex system equips the custodian for any cleaning challenge around a facility. Kaivac offers a variety of wet or dry microfiber pads for cleaning floors, walls, chalkboards, desktops, lockers or any other hard surface. In addition, the system's versatile design makes it perfect for a variety of applications.

- Daily Floor Cleaning
- Daily Hard-Surface Cleaning
- Stripping Floors
- Finishing Floors
- Degreasing Kitchens
- Applying Gym Floor Finish
- Light-Duty Restrooms
- Salt Pick-Up
- Educational Facilities
- Hospitals
- Nursing Homes
- Retail Stores
- Office Buildings

KAIMOTION™ FLEX

The Flexible and Friendly Cleaning System

WORKER FOCUSED ERGONOMICS

The front corners of the trolley have built-in pour spouts and a rim that props easily onto the front of a toilet for easy, lightweight dumping.

An optional adjustable-length ergo-handle improves floor care for the worker by enabling fast, safe and stress-free steering.

GREEN CLEANING

Re-usable microfiber pads use up to 90 percent less cleaning solution than traditional mopping. And, in some instances, chemicals can be eliminated altogether, especially on non-touch points. The re-usable pads combined with chemical and water savings mean a greener approach to cleaning.

PRODUCTIVITY AND COST EFFICIENCIES

- Microfiber pads use up to 90 percent less solution than traditional mopping to reduce chemical costs and closet trips.
- Lowest cost, most flexible microfiber system available.
- Since solution stays clean, trips to empty dirty water are eliminated for maximum productivity.

COMBINE THE OLD WITH THE NEW

An optional heavy duty down-pressure wringer is available for conventional mopping procedures.

KAIMOTION™ FLEX Interlocking Bin System

MAKE WORK EASY AND ORGANIZED WITH THIS LOW-COST, MICROFIBER SOLUTION

KaiMotion's Interlocking Bin System lets users customize a microfiber cleaning system with just a few simple components.

Create An Independent Trolley System

Configure a system to tackle virtually any cleaning task.

The basis of the system is a lightweight, semi-transparent plastic bin.

- Interlocking hooks allow up to five bins to be joined together.
- Add quick connecting casters for instant mobility.
- Load bins with a mop, microfiber pads, supplies and tools.
- Easily guide the trolley with the mop handle.

For Workers on the Go

Perfect for transporting up stairs, between buildings or across town. They can also be stored and stacked in vehicles, closets and store rooms.

Convenient Features

- Bins nest for easy, stable stacking.
- Each bin has a handle and tight fitting lid.
- Bins hold up to 30 microfiber mop pads stacked horizontally or 20 pads vertically.
- Use with existing janitor carts and trolleys.
